- 1372mm x 30m – 126917

Applications Include

- Outdoor / indoor signs
- Wall paper
- Mural
- Booth display
- Wall advertising
- POS
- Signage

Features & Benefits

- Easy and clean cuts. The anti-fray characteristics allow for problem free cuts around fine detail without fraying or lifting away from the release liner.
- Fusion Solvent Woven Fabric Repositionable is sure to be a choice you will be happy with for premium interior applications for sealed walls, displays, glass and film, cabinets, metal and plastic. Outdoor promotional applications include vehicles, bus shelters, sandwich boards, doors and windows.
- As a polyester material, it won't stretch or shrink like vinyl wall graphics. This is very important for wall graphics that may butt up to each other, or if you want to take down and re-apply the graphic in another location. You very well may lose formation integrity with vinyl, but not with our polyester.
- Fusion's solvent woven matte finish gives your media a rich, non-glare, textured surface, resulting in brilliant colours that pop off the fabric.

Characteristics

Base weight	290gsm
Surface finish	White Woven
Opacity	92%
Brightness	88
